Using CMEMS Tidal Currents

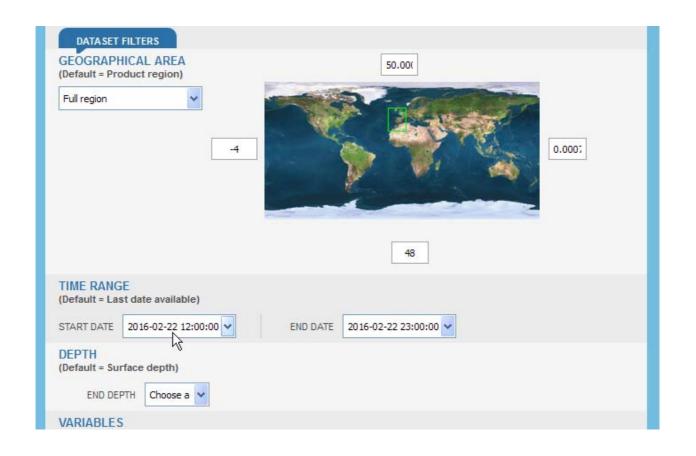

Find your way to the CMEMS Online Catalogue. Select "Iberia-Biscay-Ireland Regional Seas" and "Ocean Currents"

Open your shopping cart and press "DOWNLOAD".

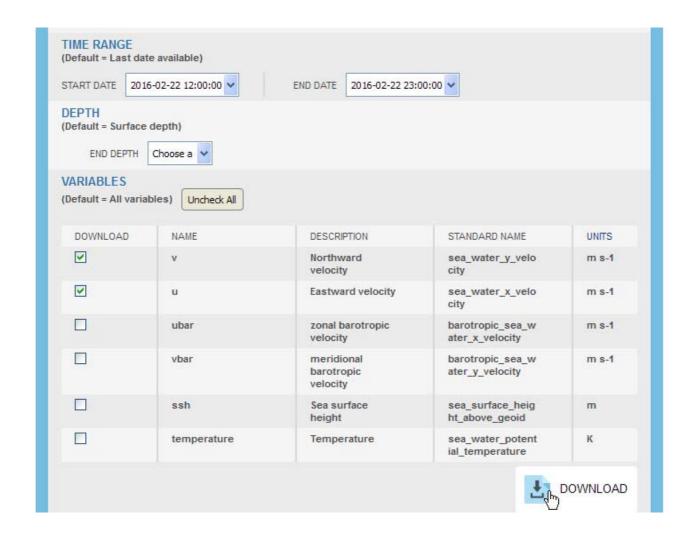

Login with username and Password. The selection screen for the currents appears.

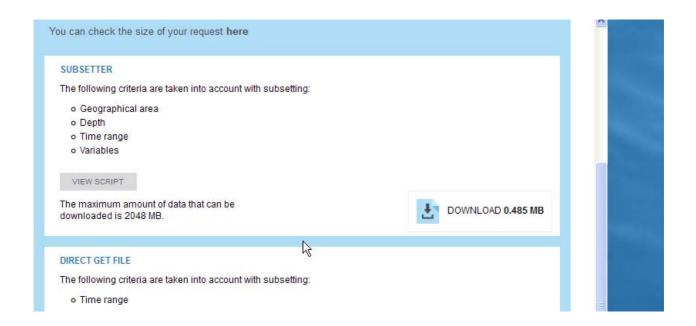

Change the lat/lon figures to choose an area of at least 2 degrees of latitude and 4 degrees of longitude.

Choose a start and end date to cover a period of less than 48 hours.

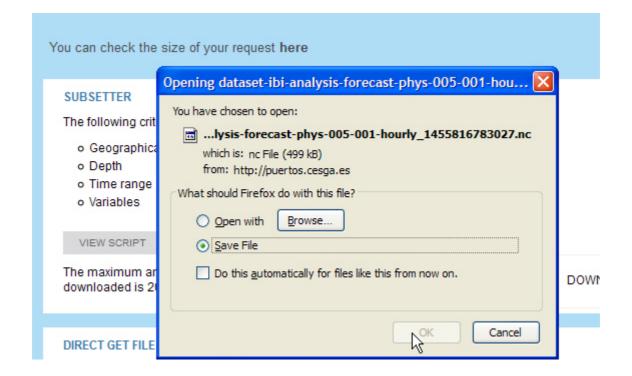

In the lower part of the screen de-select ubar, vbar, ssh and temperature.

Press "DOWNLOAD"

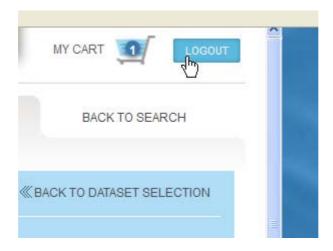

This will show you the size of the download.

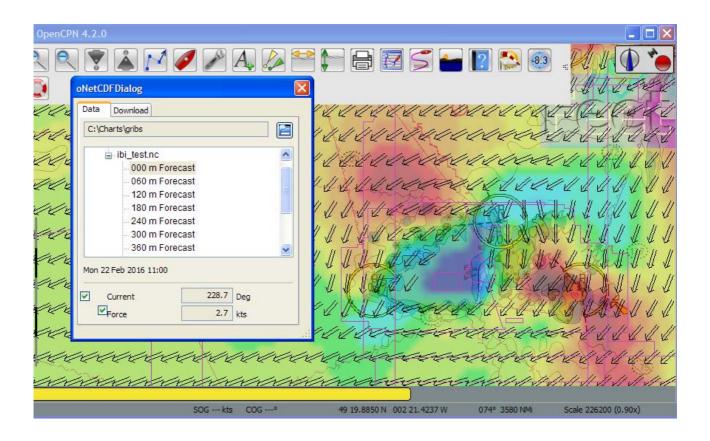

Press the "DOWNLOAD" button.

Save the file.

"LOGOUT" from CMEMS. Not really necessary but it is encouraged.

Copy the file to a folder dedicated to 'nc' files. Best to start with a new folder for these files, to avoid the tree in the plugin showing unwanted files.

+ expands the forecast tidal currents in the file.
